

BUSINESS REQUIREMENTS DOCUMENT (BRD)

Product: Sorted – AI-Powered Preschool Management SaaS

1. Project Overview

1.1 Purpose

The purpose of this document is to define the business and functional requirements to transform the existing AI-based POC of Sorted into a scalable SaaS product for preschool management.

1.2 Product Vision

Sorted aims to be a voice-enabled, AI-driven preschool operating system that allows administrators to manage daily operations such as attendance, lesson planning, staff coordination, inventory, and communication from a unified dashboard.

1.3 Key Value Proposition

- Operate school using voice commands
- Reduce manual admin workload
- Centralize all preschool operations
- Provide real-time insights and automation

2. Roles & Responsibility

Role	Responsibility
Client / Product Owner	Business requirements & validation
Development Team	Product engineering

UI/UX Team	Experience design
QA Team	Testing & validation
End Users	School Admins, Teachers, Staff

3. User Roles

Based on MVP screens (Students, Staff, Attendance modules):

Super Admin (SaaS Level)

- Manages multiple schools (future scope)

School Admin

- Full control over operations
- Dashboard access

Staff / Teachers

- Attendance marking
- Lesson planning
- Task updates

Support Staff

- Cleaning & maintenance updates (with read aloud and translation option)

Parents (Future Scope)

- Notifications, transport tracking

4. Modules & Functional Requirements

4.1 Dashboard Module

Features:

- Daily summary:
 - Tasks
 - Personal to do list
 - Staff present (with time)
 - Children present (with time)
 - Low stock alerts
- Quick actions:
 - Mark Attendance
 - Assign Task
 - Create Lesson Plan
 - Add Event
 - Check Inventory

AI Integration:

- Voice command trigger (primary USP)

4.2 Student Management

Features:

- Add/Edit/Delete students - Promote students to next grades, Alumni database
- Class mapping (Play Group, LKG, UKG, Nursery - multiple sections)
- Parent details
- Status (Active/Inactive)

4.3 Staff Management

Features:

- Add/Edit staff
- Role assignment:
 - Admin
 - Teacher
 - Support Staff

- Status control

4.4 Task Management (Page 3)

Features:

- Create tasks
- Assign to staff
- Status tracking:
 - Pending
 - In Progress
 - Done
 - Modify / Delete
- Priority & due dates

4.5 Attendance Module

Features:

- Separate views:
 - Children
 - Staff
- Status:
 - Present / Absent / Half day / Early Departure (with remarks)
- Bulk marking option

4.6 Inventory Management

Features:

- Track stock levels
- Categories:
 - Teaching aids
 - Cleaning items
 - Replaceable items (scissors, Tape, Glue, Sketch etc)
- Low stock alerts
- Add/Edit/Delete items

Integration:

- Linked with Activities & Events (auto consumption)

4.7 Cleaning & Maintenance

Features:

- Task assignment
- Location-based tracking
- Status updates
- Issue reporting
- with read aloud and translation option

4.8 Lesson Planning

Features:

- Create lesson plans by class
- Activity descriptions
- Edit/Copy/Delete plans

4.9 Activities Module

Features:

- Plan classroom activities
- Assign materials
- Schedule date/time
- Favourite the activities that works well

4.10 Events Module

Features:

- Create events
- Track progress
- Event status

4.11 Communication (Messages)

Features:

- Message templates:
 - Event reminders
 - Fee reminders
 - Announcements
 - General one on one communication between admin and parent (**Not teacher and parent.**)

- Send to:
 - Parents
 - Staff

4.12 Settings Module

Features:

- School details
- Class group management
- Profile management

5. AI & Voice Command System (Core USP)

Functional Requirements:

- Voice input button (visible in all screens)
- Convert voice → action:
 - “Mark attendance for LKG”
 - “Create task for cleaning staff”
 - “Add inventory item”
- NLP-based command parsing
- Confirmation before execution

6. Future Scope

- Billing & Fee Management
- Budgeting Module
- Transport Tracking (Parent-facing)
- Messaging, Attendance report, Lesson plan shared via parent portal

Integration Logic:

- Billing → feeds Budgeting
- Activities/Events → consume Inventory
- Transport → parent notifications

7. Non-Functional Requirements

7.1 Performance

- Response time
- Real-time updates

7.2 Security

- Role-based access control
- Encrypted data storage

7.3 Scalability

- Multi-school SaaS architecture

7.4 Usability

- Simple UI (non-tech users)
- Mobile responsive

8. System Architecture

- Frontend: Bootstrap / React / Flutter
- Backend: Node.js / PHP / Python
- Database: MongoDB / MySQL
- AI Layer:
 - Speech-to-Text (Google / OpenAI)
 - NLP engine for command parsing

9. Workflow Overview

1. Admin logs in
2. Uses dashboard / voice command
3. Performs operations:
 - Attendance
 - Tasks
 - Inventory
4. Data updates across modules
5. Notifications triggered

10. Assumptions

- Schools have basic internet access
- Users are non-technical → UI must be simple
- Voice feature is a primary differentiator

11. Success Metrics

- Reduction in admin workload
- Daily active usage
- Voice command adoption rate
- Task completion efficiency
